

Initial Report Assignment

Divija Reddy Varkuti

CSCI 4950_OL1 STEM Project Laboratory

Professor Mauricio Yepez

June 21, 2026

1. Project Identity & Scope

Tentative Project Name: *Arise: Daily Leveling*

Project Domain: Web Application

Problem Statement:

Many college students struggle to balance their academic responsibilities, work schedules, and personal well-being. As a full-time student with two part-time jobs on campus, I often find it difficult to keep track of assignments, work shifts, meals, exercise, medication schedules, and sleep routines. Managing these responsibilities across multiple calendars, reminder applications, and notes can become overwhelming and often leads to missed deadlines, forgotten tasks, unhealthy habits, and increased stress levels.

The purpose of **Arise** is to provide a centralized platform that helps users manage all aspects of their daily lives in one place. The application will allow users to organize academic schedules, track work commitments, monitor wellness habits, manage medication reminders, record meals, and maintain fitness activities. By combining productivity and wellness tools into a single application, **Arise** aims to help users stay organized, improve time management, reduce stress, and maintain a healthier lifestyle.

2. Target Audience & User Persona

Name

Sung Jinwoo

Photo

Demographics

- **Age:** 22
- **Occupation:** Full-Time College Student
- **Education:** Undergraduate Student
- **Tech Savviness Level:** Advanced

Goals & Motivations

Jinwoo is a busy college student who wants to successfully balance academic responsibilities, part-time employment, and personal wellness. Jinwoo is motivated by the desire to stay organized, improve productivity, maintain healthy habits, and reduce daily stress.

Goals include:

- Graduate successfully with strong academic performance.
- Stay organized and meet assignment deadlines.
- Balance school, work, and personal life effectively.
- Improve sleep quality and daily routines.
- Maintain consistent fitness and wellness habits.
- Remember medications and important appointments.

Pain Points & Frustrations

Jinwoo currently faces several challenges that impact daily productivity and well-being:

- Frequently forgets assignment due dates and important deadlines.
- Uses multiple applications to manage different responsibilities.
- Struggles to maintain a consistent sleep schedule.
- Occasionally forgets medication reminders.
- Misses meals during busy days.
- Finds it difficult to balance work schedules with academic responsibilities.
- Has limited visibility into overall productivity and wellness progress.

Relevance

Because Jinwoo struggles to manage multiple responsibilities simultaneously, **Arise** will include a centralized dashboard, recurring reminders, habit tracking, calendar scheduling, and wellness

monitoring tools. These features directly address Jinwoo's organizational and wellness challenges.

3. Requirements Gathering (SDLC Phase 1)

The following requirements were identified based on the needs of students and working professionals who require a centralized platform to manage academic, professional, and personal responsibilities.

Functional Requirements

1. The system shall allow users to create a personal account using an email address and password.
2. The system shall allow users to securely log in and log out of their accounts.
3. The system shall provide a personalized dashboard displaying the user's daily schedule, tasks, and reminders.
4. The system shall allow users to create, edit, delete, and prioritize tasks.
5. The system shall allow users to schedule recurring tasks such as classes, work shifts, and daily routines.
6. The system shall provide daily, weekly, and monthly calendar views for schedule management.
7. The system shall allow users to track sleep schedules by recording sleep and wake times.
8. The system shall allow users to log meals, water intake, and other nutrition-related information.
9. The system shall allow users to record fitness activities, workouts, and exercise durations.
10. The system shall allow users to create medication reminders with customizable notification times.
11. The system shall send notifications and reminders for upcoming tasks, events, medications, and appointments.
12. The system shall allow users to categorize activities into areas such as academics, work, health, and personal life.
13. The system shall generate weekly and monthly productivity reports based on completed activities and habits.
14. The system shall allow users to track habit streaks for recurring activities such as exercising, taking medication, and maintaining sleep schedules.

15. The system shall provide visual analytics and charts to help users monitor productivity, wellness, and goal progress.

Non-Functional Requirements

1. The application shall load all primary pages within three seconds under normal operating conditions.
2. User passwords and sensitive account information shall be securely encrypted and stored using industry-standard security practices.
3. The application shall be responsive and fully functional on desktop, tablet, and mobile devices.
4. The system shall maintain at least 99% availability and reliability during normal operation.
5. The application shall provide an intuitive and user-friendly interface that requires minimal training for new users.
6. The system shall support modern web browsers, including Google Chrome, Microsoft Edge, Mozilla Firefox, and Safari.
7. The application shall follow accessibility guidelines to ensure usability for users with varying abilities.
8. The application shall be designed using a scalable architecture that supports future feature enhancements and increased user activity.
